LOGICAL OPERATORS

Start

LOGICAL OPERATORS

- Used to combine conditions
- Result is either:
  - true
  - false
- Think of truth table

AND OPERATOR (&&)

- Both conditions must be true

Example:

```
if (x > 5 && y < 10)
```

- True only if BOTH are true

OR OPERATOR (||)

- At least one condition is true

Example:

```
if (x > 5 || y < 10)
```

- True if ONE or BOTH are true

NOT OPERATOR (!)

- Reverses the condition

Example:

```
if (!(x > 5))
```

- True if condition is false

TRUTH TABLE

A	B	A && B	A || B	!A	!B
true	true	true	true	false	false
true	false	false	true	false	true
false	true	false	true	true	false
false	false	false	false	true	true
